# INTRODUCTION

## Introduction

Italplant is the ideal solution to your rotary indexing application. Our drives are all with feature positive cam operated movements. This means acceleration and velocity are completely controlled throughout the entire cycle giving extremely accurate, reliable, shock free motion. Even at high speed (up to 2000 indexers per minute) or with high inertia loads, Italplant indexers remain smooth and accurate. Here you can find the advantages of our indexers:

- **Simplicity** - There are only two basic elements, the cam and the turret
  - **Reliability** - The mechanisms are of extremely robust proportions, having a long life with virtually no maintenance.
  - **Self-locking** - All the mechanisms are self-locking in the dwell position and require no auxiliary locking device. The turret will withstand full load torque in either direction while stationary.
  - **Reversibility** - The mechanism will work equally well in both directions of rotation.
  - **Smooth movement** - The manufacturing process cams ensures a smooth, shock-free transfer from follower to follower, with positive control throughout the movement.
  - **High Speed** - A cam system gives the designer a free choice of displacement / time function. The advantage of this has been taken to employ acceleration characteristics which minimize the shock forces produced at high speeds of high inertia loads. Machines can be indexed with Italplant Indexing Mechanisms considerably faster than others with other systems.
  - **Efficiency** - The use of low-friction Italplant follower bearings results in very high efficiencies, so that the power losses in the cam and turret are negligible.
  - **Compactness** - Size for size, the load carrying capacity is higher than that of any other type of indexing mechanism.
  - **Safety** - With the Safety Output Torque Limiter **PATENTED system**, it's possible to protect the roller followers of the indexer in case of external jamming on the dial plate/arms/conveyors moved. The protection is possible thanks to friction positioned internally to the rotary table mechanism, that in case of jamming - after the reach of a max. allowable torque - that it's possible to set manually - disengages the internal mechanism, giving an electrical emergency signal and protect the rotary table.
- Thanks to this feature the **Warranty of the rotary tables becomes 5 Years**.
- **Flexibility** - Fitting a continuous motion cam, it's possible to change the output angle of movement with a servomotor assembly.
  - **Accuracy** - The Italplant special manufacturing technique ensures that position accuracy is maintained by the elimination of backlash during the dwell. This is possible thanks to the globoidal cam shape of our indexers. Italplant rotary tables for that reason are surely the most accurate in the field of cam mechanism.

## The product you need

In reference to your application, you can choose between four types of **Italplant globoidal indexers**:

ITALPLANT Slimdex SX

ITALPLANT Stationary Plate SP

ITALPLANT Mark 2 MK2

ITALPLANT Toroidal Indexer TIG

The Slimdex **SX** series is suitable for low profile dial applications with large output flange and through hole or center post for services like passing of cable or support of fixed centered dial.

The Stationary Plate **SP** is an high capacity series with location diameter and mounting face for stationary tooling plate.

The Mark 2 **MK2** is a series very rigid in construction, suitable for fast applications thanks for the low inertia of the internal turret and the possibility to fit a twin dwell cam. Its special design minimises the effect of roller reversal and results in a long life.

The Toroidal Indexer **TIG** is a series suitable for an application that requires a large though hole or accurate positioning at a big diameter of the positioning of the stations. The **TIG** can be provided as the other series with the **PATENTED** Safety Output Torque Limiter, becoming the only toroidal rotary table with a synchronous clutch that protects the mechanism in case of output jamming on the dial.

## GLOBOIDAL INDEXERS PRODUCT RANGE

<b>SX</b> <small>(pag. 15)</small>	<b>SP</b> <small>(pag. 27)</small>	<b>MK2</b> <small>(pag. 35)</small>	<b>TIG</b> <small>(pag. 51)</small>

SX 140 HD		MK2 1100 HD	

# STEP 1: CHOOSE YOUR INDEXER BY FEATURES

## The indexer you need

Italplant globoidal indexers are suitable for all the applications you need, say in case of mounting a dial plate, shaft or to move a linear conveyor. These diagrams indicating the main features of every serie, to help you to select your preferred choice.

# STEP 2: CHOOSE THE FIXING FACE

## How to fix the indexer

The choosing of the face used for the connection on the indexer to your base frame needs to be defined in order to use its attachments holes for a rigid positioning and for optimal reading of the oil sight glass.

In reference to the indexer type, is possible to use or not all the faces of the next image.

Available mounting faces:

- **SX 25 - MK2 (ALL MODELS): W - U - X - Y - Z - V**
- **SX 140 - SP 805 - SP 1705: W - U - Z - V**
- **SX 40 - SX 60 - SX 95: W - U - X - Y - Z**
- **SP 1205: W - U - Z**
- **TIG (ALL MODELS): W - U**

## STEP 3: CHOOSE THE MOUNTING POSITION

### INDEXER mounting position

The first parameter to define it's the indexer position. After that, the input shaft where is fitted the motoreducer (if requested) and its orientation.

A

B

C

D

E

F

### DRIVE mounting position

## STEP 4: CHOOSE THE MOTORIZATION

ITALPLANT Globoidal Rotary Table

ITALPLANT High Efficiency Reducer

Epicicloidal reducer

# OPTIONAL FEATURES

## CENTER THROUGH HOLE - STATIONARY CENTER POST

The ITALPLANT globoidal indexers can be provided with two features:

- The Center Through Hole, in the middle of the output turret. Useful to pass electrical cables or pneumatic pipes, ready to be distributed on the upper dial plate. It's possible to ask for this hole in tolerance, in case the customer needs to connect a central rotating shaft.
- The Stationary Center Post, a shaft that gives a fixed point of attachment for upper customer's components. It's possible to ask for a passing through hole, in tolerance on request

## DIAL PLATE

To support the piece's fixtures, for most of the indexer applications is used a dial plate.

Made in aluminum or steel, it becomes the most important component after the rotary table. In fact, thanks to a finely machined dial plate all the stations will be positioned with the accuracy of hundredths of a millimeter.

ITALPLANT can provide custom size dial plates, with screws holes, centering hole pins holes and special openings to reduce the weight.

## BASE CELL FOR INDEXERS

In case of need of a machine base with an indexer built in, ready to be used, ITALPLANT is able to propose a full base cell.

This is composed of a solid welded structure that gives rigidity to the application and user control panel, for the control in real time of the indexer motion, plus a customized dial plate assembled on the indexer suitable for the customer's application.

The base cell can be provided with different voltages in reference to the different country where it will be used and with CE marked.

## OPTIONAL FEATURES

### HIGH SPEED INDEXERS

The most suitable indexer version for the high speed is the Globoidal MK2, thanks to its reduced internal inertia and double conical bearings.

However, also the other globoidal versions can run faster, thanks to a special ITALPLANT kind of cam, born for that.

Please feel free to indicate the desired index time to our Tech Dept. that will verify the feasibility and will size the correct cam.

### EXTRA ACCURACY

The range of globoidal indexer allows the customers to choose between a wide range of angular positioning accuracy.

If the value indicated is not enough, thanks to his know how and fine selection of the components, ITALPLANT can grant extra accuracy to certain kind of rotary tables.

Feel free to ask our Tech Dept. an extra accuracy customization, by indicating the type of indexer chosen and the minimum value of accuracy required on every station, in arcsec measured from the center of the indexer.

By request, a test report will be provided before the delivery, to prove the real value of the indexer's accuracy.

### FOOD & PHARMACEUTICALS

The environment of each application can mean to ask for special materials allowed in food productions and many other fields, like clean room machinery.

For these specific requirements, ITALPLANT proposes a wide range of solutions, like the use of food oil/grease or different materials, as aluminum, steel or plastic. This last material had been developed not only for food and pharmaceutical applications, but also for explosive environments. In these cases ITALPLANT can provide a FULL PLASTIC INDEXER, to fit the customer's requirement (PATENTED).

## OPTIONAL FEATURES

### TIMING DEVICE (PATENTED)

This patented system has been developed by ITALPLANT for all the applications where it's necessary to change the support of fixtures on each dial plate station, for batch change.

Usually, this operation requires much time and technicians to work on it. With this automating phasing system, without any disassembly, can be done in less than one minute.

It's only necessary (for example for three types of pieces), to assemble the fixtures in this way: A-B-C-A-B-C-A-B. During the rephasing, automatically the indexer will change the work position from A to B or C.

An important note is that this is a mechanical system, that eliminates any mistakes, which otherwise can be caused by electronically controlled systems.

### ROTARY PLACERS

The ITALPLANT indexers can be provided with a customizable turn and lift system (EL). It allows to rotating the dial plate with pieces on and in the same time to combine a lifting of it, phased with the application's cycle.

The lift is operated by an accurate cam, that allows a smooth accurate movement, with controlled acceleration and deceleration, to guarantee the perfect positioning at the required height.

This system is very useful to be mounted also under production lines, to drive the customer's pallets with products on.

### ROTATING AND TILTING DEVICE POSITIONER

This system with light and simple design, high load capacity, the flexibility of operating angular ranges, the most accurate repeatability in commerce, born from the match of two of ITALPLANT globoidal indexer, a positioner suited for every need.

Completely programmable with servo motors the globoidal cam indexer guarantees high accuracy and reliability that all the customers are looking for.

## OPTIONAL FEATURES

### REMOTE DATA IRC (PATENTED)

The Indexer Remote Control is a new system for remote monitoring of key performance measures at the heart of the machine.

To observe remotely with a smartphone or tablet the key machine's parameters, including:

- Speed (which effects the machine life)
- Temperature (of indexer and environment)
- Vibration (with reference to the rigidity, which is the most important data for the machine life)
- Phase (to see if the dwell meet the cam law)
- Main parameters compared with the previous ones calculated for the specific application (changeable)
- Overall rigidity looking at the HERZ vibration value calculated by our technical office and based on the indexer rigidity and the output mass rigidity.

### SOTL+ATT (PATENTED)

This patented system, included in all the ITALPLANT rotary table, allows the system motorization+conveyors to protect himself in case of external jamming, on the links.

The protection it's possible thanks to adjustable synchronous coupling positioned internally to the rotary table mechanism, that in case of jamming - after the reach of a max. allowable torque - that it's possible to set manually - disengages the internal mechanism, giving an electrical emergency signal and protect the rotary table.

Thanks to this feature the Warranty of the rotary tables becomes 5 Years.

### SITL

This system protects the rotary table in case of safety panic stops operated on the motor.

It's composed by friction that in case of over-torque generated by the motor, is able to cut the cinematic motion in this direction. It allows also a smooth machine stop.

With this system, the weakest components of the indexer, the roller followers, are protected and the life of the indexer is increased.

## EXAMPLES OF APPLICATIONS

SX 95 HD – Car pedal assembly

SP 805 HD - Car seats base structure welding

## EXAMPLES OF APPLICATIONS

MK2 500 HD - Bottle caps mounting

TIG 1200 HD - Automation bearing induction hardening process

# GLOBOIDAL SLIMDEX INDEXER

The Globoidal Slimdex series SX is ideally suited for slim rotary table applications.

These low profile units feature Globoidal cam controlled movement for speed, accuracy and reliability at prices competitive with other air and hydraulic devices.

All Slimdex models are available with a high performance drive package including indexer, worm reducer (with or without the integral slipping clutch, AC or DC motors and enclosed proximity switch. Available with Safety Output Torque Limiter SOTL/ATT.

#### Options:

- Center through hole, for the passage of electrically/hydraulic equipment cables
- Stationary center-post, available with center thru hole
- Choice of motor/worm reducer positions
- Available as indexer alone, without reduced or motor
- Available with Safety Output Torque Limiter SOTL/ATT

#### Features:

- Low profile compact package
- Solid state speed controller with start on demand, auto-stop and dynamic breaking
- Enclosed cycle control switch for cycle-on-demand applications
- High accurate roller followers for smooth motion and accurate indexing
- Fully ground cam profile
- Removable handwheel for easy set-up

#### Available model sizes

**SX25 - SX40 - SX60 - SX95 - SX140**

# SX 25

## Load capacity:

- **Axial load:** 150 daN
- **Tilting moment:** 11 daNm

## Indexing precision:

- **3-10 Index**  $\pm 42''$  (arcsec)
  - **12-16 Index**  $\pm 63''$  (arcsec)
- Values improvable on request

## Dimensional info:

- **Centre distance:** 62 mm
- **Size:** 140 x 165 x 115 (H) mm
- **Weight:** 10 kg

## Additional features

- Compact size and high capacity
- HD Heavy Duty
- Though Hole version
- Provided with three-phase motoreducer

## Indexer overview

## Optionals on request

- Oscillator version
- Continuous cam with servomotor
- Dial plate (see page 8)
- Encoder / additional control cycle cams
- Base cell (see page 8)
- Food oil or grease

## Input shaft cam angles

## Maximum equivalent radius of gyration

# GLOBOIDAL STATIONARY PLATE INDEXER

The Stationary Plate series for globoidal index units comprises a range of special shape high strength cast iron housing designed to provide features which can allow them to be used as the base of a rotary or linear machine. The housing has a large location diameter onto which a stationary plate can be attached, This may be used for the tooling assembly such as drilling heads, load/unload devices etc. A large bore in the output shaft is provided as standard, through which services such as air and/or liquids can be passed.

In addition, a stationary centre post can be fitted, onto which a second plate can be mounted. A full range of stops, index angles and cam laws is available. Available with Safety Output Torque Limiter SOTL/ATT.

For cycle-on-demand applications, index angles up to 330 degrees are available.

The SP range of units can also be mounted with the output shaft vertical/horizontal for use in linear applications.

## Options:

- Center through hole, for the passage of electrically/hydraulic equipment cables
- Stationary center-post, available with center through hole
- Choice of motor/worm reducer positions
- Available as indexer only without reducer or motor
- Available with Safety Output Torque Limiter SOTL/ATT

## Features:

- Rigid cast iron housing
- Large diameter pre-loaded taper roller bearings
- Location diameter and mounting face for stationary tooling plate
- High accurate roller followers for smooth motion and accurate indexing
- Fully ground cam profile

## Available model sizes

# GLOBOIDAL HIGH SPEED INDEXER

Indexing units with orthogonal axes MK2, high accuracy, no backlash. Twin dwell cams and various other cam laws. Available from 1 to 32 stops (more on request) with high value of dynamic capacities and various values of center distance.

Most of these mechanisms can be supplied with the high speed special cams.

Available with Safety Output Torque Limiter SOTL/ATT.

Options:

- Center through hole, for the passage of electrically/hydraulic equipment cables
- Choice of motor/worm reducer positions
- Available as indexer only without reduced or motor
- Available with Safety Output Torque Limiter SOTL/ATT

Features:

- Hardened & ground steel cam
- High precision heavy duty cam followers
- Rigid cast iron housing
- Largest range of stops & index periods
- Pre-loaded taper roller bearings
- Optimum motion law
- Special Italplant cam for extra high speeds

## Available model sizes

**MK2 210 - MK2 325 - MK2 425 - MK2 500 - MK2 650 - MK2 800 - MK2 1100**

# MK2 210

## Load capacity:

- **Axial load:** 90 daN
- **Tilting moment:** 8 daNm

## Indexing precision:

- **3-10 Index**  $\pm 53''$  (arcsec)
  - **12-16 Index**  $\pm 79''$  (arcsec)
- Values improvable on request

## Dimensional info:

- **Centre distance:** 62 mm
- **Size:** 100 x 162 x 132 (H) mm
- **Weight:** 10 kg

## Additional features

- High speed bearing for faster index time
- HD Heavy Duty
- Standard version with keyed output shaft
- Provided with three-phase motoreducer

## Indexer overview

## Optionals on request

- Oscillator version
- Continuous cam with servomotor
- Dial plate (see page 8)
- Encoder / additional control cycle cams
- Base cell (see page 8)
- Food oil or grease

# GLOBOIDAL TOROIDAL INDEXER

The Italplant toroidal indexers TIG are large and slim globoidal cam mechanisms with similar functioning to the other rotary table of our production. The difference with these is that turn a ring instead of the dial plate.

The toroidal shape is particularly useful in case you need a lot of space in the central area. This space allows, in addition to the passage of cables, the placing of assembly stations, pick and place, robots and any other types of equipment that would otherwise be located outside, taking away valuable space.

The result is a compact indexer, with performance and load capacity superior to its competitors, due to the roller follower by Italplant design, which enhances the mechanical properties.

## Options:

- Choice of motor/worm reducer positions
- Available as indexer only without reduced or motor
- The only Toroidal Indexer with the Safety Output Torque Limiter (SOTL - Patented)

## Features:

- High speed for continuous motion running
- Enormous inner hole
- Compact design
- Optimum accuracy
- Mechanism with globoidal cam
- Low number of stops available

## Available model sizes

**TIG 800 - TIG 1200 - TIG 1600**

# TIG 800

**Load capacity:**

- **Axial load:** 3200 daN
- **Tilting moment:** 1400 daNm

**Indexing precision:**

- **4-32 Index**  $\pm 15''$  (arcsec)
- Values improvable on request

**Dimensional info:**

- **Centre distance:** 342.5 mm (HD/HHD)
- **Size:** 690 x 780 x 170 (H) mm
- **Weight:** 200 kg

**Additional features**

- Large full through center hole
- HD Heavy Duty or HHD Heavy Heavy Duty
- Slim toroidal indexer with low height
- Provided with three-phase motoredreducer
- Ring indexer available with torque limiter

**Indexer overview**

**Optionals on request**

- Oscillator version
- Continuous cam with servomotor
- Dial plate (see page 8)
- Encoder / additional control cycle cams
- Customized base frame support
- Food oil or grease

**Input shaft cam angles**

**Maximum equivalent radius of gyration**

Maximum equivalent radius of gyration in mm - Equivalent radius of gyration referred to HD (HHD) versions - All the values are referred to 300° of input shaft index motion at standard index time with 50 Hz motoredreducer - Others stops number and index times are available, on request

Available stops	Centre distance	Denomination
4 - 5 - 6 - 8 - 10 - 12 - 16 - 24 - 32 OTHER STOPS AVAILABLE ON REQUEST	HD/HHD VERSION - 342.5 mm	TIG 800 HD TIG 800 HHD

**Input shafts variants**

**RIGHT (1) - LEFT (2) - DOUBLE (3)**

**SOTL + ATT version**

**AVAILABLE - RELEASE CAM POSITIONABLE AT DIFFERENT LATERAL SIDE**

# TIG 1200

## Load capacity:

- **Axial load:** 7200 daN
- **Tilting moment:** 3100 daNm

## Indexing precision:

- **3-32 Index**  $\pm 9''$  (arcsec)

Values improvable on request

## Dimensional info:

- **Centre distance:** 600 mm (HD/HHD)
- **Size:** 1204 x 1373 x 262 (H) mm
- **Weight:** 1100 kg

## Additional features

- Large full through center hole
- HD Heavy Duty or HHD Heavy Heavy Duty
- Slim toroidal indexer with low height
- Provided with three-phase motoredreducer
- Ring indexer available with torque limiter

## Indexer overview

## Optionals on request

- Oscillator version
- Continuous cam with servomotor
- Dial plate (see page 8)
- Encoder / additional control cycle cams
- Customized base frame support
- Food oil or grease

## Input shaft cam angles

■ Available ■ On request

## Maximum equivalent radius of gyration
